Fuels of the Future 2018 - CORRECTION

In our last Newsletter some old and new data on the Fuels of the Future Conference got mingled - we apologize and hereby present the correct programme:

The programme of the 15th International Conference on Renewable Mobility "Fuels of the Future" is now available. The event will take place at the CityCube Berlin on 22-23 January 2018.

Climate protection in transport has evolved into a key issue; however, the necessary, sustainable reduction of emissions can only occur by being open to new technologies.

What role will the combustion engine play in mobility in the future? The increasing diversification of drive technologies and the development and market introduction of alternative fuels offer major challenges for the industry, but also economic opportunities. The programme of the conference in 2018 focuses on these topics, as well as the development and market opportunities of new drive technologies.

The international conference on "Fuels of the Future" represents the leading European forum on the issue of future mobility, particularly with its focus on alternative fuels and drive technologies.
