### **Strategic Research and Innovation Agenda 2018**

ETIP Bioenergy update

RED II adoption and SET Plan implementation are big steps forward for the deployment of sustainable bioenergy, a fundamental tool to mitigate climate change. On December the 4th the EU Council of Ministers adopted the RED II which sets a headline target of 32% energy from renewable sources at EU level for 2030, and a target of at least 14% of energy from renewable sources in transport.

ETIP Bioenergy has adopted an update of the Strategic Research and Innovation Agenda of 2016, whose aim is to present the most significant recent developments relevant for bioenergy and biofuels and to highlight the corresponding priorities in research, development and demonstration activities.
