Bioenergy Europe Statistical Report 2018

Since its debut in 2007, Bioenergy Europe's Statistical Report has provided an in-depth overview of the bioenergy sector across EU-28.

Enriched every year with new statistics and findings, it gathers unique data on the dynamics of the European bioenergy market from a growing number of international contributors, helping the industry, decision makers, investors and all bioenergy professionals to better assess the situation of bioenergy in Europe.

Readers will get accurate, up-to-date information on the overall EU energy system, the current state of play of bio-heat and bio-electricity, the availability and dynamics of supply, and much more - including a whole chapter dedicated to statistics on pellet.
