Top Ten Blendstocks For Turbocharged GasolineEngines

Bio-blendstocksWith Potential to Deliver the for Highest Engine Efficiency

Highlights of the Report:

A tiered process efficiently and effectively screened hundreds of blendstocks.

Ten blendstocks were identified with the potential to increase engine efficiency by 10 percent using the efficiency merit function.

i-ButanoloCyclopentanone Di-isobutylene EthanoloFuran mixture Fusel alcohol mixture Methanol Prenol i-Propanol n-Propanol

Six of the blendstocks were determined to have the fewest barriers to adoption and use.

The blendstocks all have the potential to reduce life-cycle greenhouse gas emissions by at least 60 percent.

The top 10 blendstocks were all determined to have the potential to be produced at a competitive cost. Co-Optima researchers identified barriers to adoption and key research gaps to be addressed in future research
