US elections: what Trump's victory means for the bioeconomy

Donald Trump captured the US Presidency in an upset victory that confounded pollsters and political pundits even as it delighted supporters of his maverick candidacy based on themes of immigration and trade reform, coupled with a message that government policies of the past generation had failed for too many Americans. Some immediate themes emerge for the global bioeconomy as the US turns now from its lengthy election process to the transition period between Administrations. Jim Lane from the Biofuels Digest presented his ideas about the change of the US Bioeconomy policy shortly after the election.

Read here what he concludes:
