Webinar IEA Renewables 2018 market report

Thursday, 17 January 2019 15:00-16:00 CET / 9:00-10:00 EST

Renewables 2018 provides detailed renewable energy analysis and forecasts (2018-23) for the electricity, heat and transport sectors. Modern bioenergy accounts for half of global renewable energy consumption yet its role in decarbonising the global energy system is not widely recognised. For this reason Renewables 2018 includes a special focus on bioenergy.

In the upcoming webinar more about IEA's special focus on modern bioenergy can be heard, where its current contribution to energy demand and prospects for growth until 2023 in heat, electricity and transport will be presented.
